

## New chemical weather Forecasting for Lima!

Tuesday, 13 December 2011

Our colleagues at SENAMHI launches operational chemical weather forecasting for Lima! Since December the second, SENAMHI is providing chemical weather forecasting Lima. It provides a comparison with Peruvian standards and the spatial and temporal distribution of pollutant including ozone, nitrogen oxides, sulfur dioxide and carbon monoxide. This work has been done in collaboration with INPE/CPTEC. More details here . This has also reached the national tv news, if you want to see the full new, click here . Congratulations to our colleagues for a very well done work!
